

MUHAMMED BIDE MI ABDULWAHAB

AI Automation & Full-Stack Systems Builder

AI Automation • Backend Systems • Full-Stack Development • Business Process Automation

Abuja, Nigeria | +234 802 295 4809 | muhammedabdulwahab77@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Open to remote opportunities

SUMMARY

AI automation and full-stack systems builder who combines software engineering with business development and operations experience. Builds backend systems, integrations, and AI-assisted workflows that replace manual business processes — including operational dashboards, a grant/referral platform, WhatsApp automation, and a full mobility platform. Works primarily in the JavaScript/TypeScript ecosystem (Next.js, Node.js, React) with PostgreSQL and Firebase, and uses AI coding tools to accelerate implementation while retaining ownership of architecture, integration design, debugging, and testing.

SKILLS

Languages: JavaScript, TypeScript, C#, HTML, CSS

Frameworks & Runtime: Node.js, Next.js, React, .NET

Databases & Backend: PostgreSQL, Supabase, Firebase, Firestore, REST APIs, API Design, Authentication, Database Design

AI & Automation: LLM Integrations, AI-Assisted Workflows, WhatsApp Automation, Business Process Automation, API Integrations, Workflow Automation, Web Automation (Playwright), Prompt Engineering

Cloud & Deployment: Vercel, GitHub, Firebase, Docker, Cloud Deployment

EXPERIENCE

Systems & Automation

TDIS Logistics — Travel & Ticketing Operations

- Designed and built a full-stack operational dashboard, turning manual booking, wallet-balance, and reporting workflows into one centralized system used day-to-day by agents and admin staff.
- Identified repetitive operational bottlenecks and built automation — including a browser-automation connector service and a WhatsApp-based workflow — to remove them; owned the system end-to-end.

Business Development & Operations

One Acre Fund Nigeria

- Worked on field-level business development, expansion, and operational execution — coordinating with stakeholders and using data-driven analysis to identify inefficiencies and support decisions, the same problem-first approach later applied to building software systems.

SELECTED PROJECTS

TDIS Logistics — Travel Operations & Agent Dashboard

GitHub: github.com/mudone1/Tdislogistics | Live: tdislogistics-sand.vercel.app

- Built a modular travel-operations dashboard (Next.js, TypeScript, PostgreSQL, Firestore) centralizing airline wallet balances, ticket availability, client records, deposits, and debt tracking in one application.
- Built a separate Node.js/Playwright connector service that automates signing into airline B2B portals to synchronize wallet balances, with AES-256-GCM credential encryption, retry handling, and scheduled sync.
- Added a dedicated WhatsApp automation service for booking-related workflows, and migrated a large legacy single-file application into a componentized, typed Next.js architecture.

Globe-Tech — Grant & Referral Management Platform

GitHub: github.com/mudone1/Globe-Tech

- Built a full-stack grant/referral platform (Next.js, TypeScript, Firebase/Firestore) supporting public applications, token-based staff referral links, and a multi-tier staff hierarchy.
- Implemented referral tracking that connects each application back to the referring staff member, with an admin dashboard, performance leaderboard, and CSV export.
- Built automated onboarding-data sync (Google Sheets API, scheduled job), automated confirmation emails (Resend), and a bank-data verification and staff payout tracking workflow.

Fudur — Mobility Platform & Automation Product

GitHub: github.com/mudone1/fudur | Live: fudur.vercel.app

- Built a full-stack mobility platform (Next.js, TypeScript, Firebase) connecting riders and drivers through route discovery, booking, and trip management.
- Implemented transactional booking logic to prevent conflicting seat reservations, realtime group and driver chat, and push notifications via Firebase Cloud Messaging.
- Built safety functionality (trusted contacts, SOS alerts, live trip sharing, incident reporting) and shipped as an installable PWA; currently extending this as Fudur Automation, toward AI-powered workflow automation.

EDUCATION

B.Tech. Mathematics — Federal University of Technology, Minna, 2021

Mathematics background underpins an analytical, systems-first approach to problem solving and software architecture.
